DETAILED ACTION

1. Claims 1-22 are pending.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, 13-17 and 21-22, drawn to invention I, are classified in class 713, subclass 400.
 - II. Claims 6-12 and 18-20, drawn to invention II, are classified in class 713, subclass 400.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as notifying a communications module that at least one of a time and date code is to be transmitted to the communications module before at least one of the time and date code is transmitted to the communications module. That is, invention II serves as means to provide a pre-transmission notification, without regard for whether a first program executed by a microprocessor is interrupted, as claimed in invention I. Likewise, invention I serves as a means to interrupt a first program not used to update the device clock without requiring that a communications module is notified of data to be transmitted to said communications module, as claimed in invention II. See MPEP § 806.05(d).

Art Unit: 2116

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
